Decisions			I made the decision to increase the amount of time for the backend code as I feel like I will inseed some more time to implement the Au/Token and encryption. I also increased the time for the test writeup in a compart of the control code to be lower as it should not take as long as I previously estimated.							There was no need for a last case writing for a last case writing for database setup. I only needed to check whether the tables were. For the database setup implementation, have not been able to the control of the co					We decided it take Jesse of of Create Not as the Jesse of of Create Not as the Jesse of Jesse	a de la companya de l

Decisions Final Expected Work	Due to leftover tasks from last sprint, from last sprint, from last sprint, frontend flessing and Document were not included. The work estimate for Create Node - Design was becoming more familiar with the process of creating Sequence Diagrams therefore there is the process of creating separate the process of creating separate the process of creating separate last print capacity it is in the print capacity it is the complete work items on a timely basis.		Logout Backend code and testing was done in between the last sprint, and this sprint, so I have entered to finish the core components from last sprint, as well as the core components of Logging and Archiving that we had not yet migrated over to our new project core components of Logging and Archiving that we had not yet migrated very four five project plan in her special for the sprint. Although in the project plan in have separated Search and Filter into separate work letters. I will actually be estimated to the should actually be combined and reduced a bit.				Since account deletion is partially done (backend testing and frontier) and trained and testing and frontier and testing and frontier and testing and frontier and testing and frontier and testing. I have made it into another work ten to testing and the testing and testing a) hdd		It took longer to implement the testing with the testing with the took to the implementation and testing.

		Sprint 5			
	Jessie	Matthew	Pammy	Viet	
			,		
What went well	Through feedback and office hours we were able to refine our Scrum process by being more detailed	We acted on some of the feedback on our Scrum, this can be seen in our new project sheets.	Our scrum process was much more refined than last time, thanks to the feedback provided in our last retrospective and in office hours.	We got a lot of feedback from office hours and improved how we performed scrum	
Issues	Low sprint capacities as well as unexpected interruptions from other classes	We were still missing some things from showing off our sprint planning process and everyone's capacities were quite low for this sprint. We did not have a set time for updating our burnup charts, which so will be come since the dependent of the control of the c	Low sprint capacities made us not able to do much. We were pretty inconsistent with out burnup chart.	Some people were busy with classes (me included) so it made it hard to finish tasks that were assigned this sprint	
Improvements	Update scrums and burnup charts at 11pm everyday	We will have all of our burnup chart updates and Scrums posted by 11pm everyday.	Burnup charts and scrumwill be required to be posted by 11 PM everyday	We now have a set time to update our scrums and burnup charts	
		Sprint 6			
	Jessie	Matthew	Pammy	Viet	
What went well	More strict enforcement of Daily Scrum Logs and Burnup chart updates gave better insight into Team Progress	We improved our Sprint planning process by following all the steps that we discussed with the professor during office hours. This can be seen in our new Project Sheet Document. We improved the documenting of our daily Scrums and updating our Burnup Charts by setting a deadline of 11pm.	Burnup charts and scrum updated at 11pm every night. This in turn made our Project Sheet Document more accuarte.	Our scrum process was more in line with what Professor had in mine	
Issues	Work capacities were fairly low due to other issues that had presented themselves	Despite getting everyones initial capacities, issues arose that resulted in less work than predicted.	Low initial capacities and low moral.	Other classes started kicking in, and I had less time capacities	
	Team Lead will send reminders and a report of the	Everyday at the end of our daily meetings, the team leader will send out a notification in regards to everyone's daily performance, according to their burnup charts and daily Scrums, and what improvements they need to	Team leader will send a notification on daily performance, reminders on burnup charts and	Our team lead would give a daily performance	
Improvements	daily performance	make in the remaining time of the sprint.	daily scrums	report at the end of our scrums	
		Sprint 7			
	Jessie	Matthew	Pammy	Viet	
What went well	Jessie The team was able to complete most of the work we had for this Sprint despite any issues that presented themselves	Matthew Despite the issues that we ran into, the team was able to mostly complete all of the work that we brought in for this sprint. We also made further adjustments to our project and sprint planning.	Pammy	Viet Even though we ran into problems, the team as a whole was able to finish up a lot of the work that was assigned this sprint	
	The team was able to complete most of the work we had for this Sprint despite any issues that presented themselves Timing with other class assignments created	Despite the issues that we ran into, the team was able to mostly complete all of the work that we brought in for this sprint. We also made further adjustments to our project and sprint planning. At the start of the sprint, we were still unsure of what exactly we needed to be doing in order to work towards the completion of Milestone 3. Once again, we ran into slight issues with capacities due to outside factors such as other classes. Not everyone was complying with the deadlines for	Issues in understanding what was needed in low level design prevented us from really contributing much this sprint. In general, this is due to a lack of	Even though we ran into problems, the team as a whole was able to finish up a lot of the work that was assigned this sprint

We will have sprints throughout break, but with reasonable	

What went well	We were able to devote a good amount of time towards finishing the Milestone and Sprint putting in however many hours were necessary.	For the most part, the team was able to put in a lot of time in order to finish the Milestone. We were able to finish the design of all the Milestone items and code a majority of them.	We were able finish all the milestone documents as well as the sequence diagrams for the milestone. I think we got a good idea as a time how much effort will be needeed to complete this project	We were able to get all the required documents and diagrams done for milestone 3		
Issues	Our work as not as complete as it could have been and there were some issues in our design that we were not aware of until after we had implemented it.	worked by the due date. Due to other finals, as well as personal reasons, capacity took a down turn during some moments.	We were not able to complete the work we assigned to us as our design had a lot of issues. We were not aware of the issues until after we implemented. These issues included libraries that pointed to each other	We underestimated issues in both design and coding and were rushed towards the end and our deliverable wasn't the as clean as it could have been		
Improvements	As a team we realized how our capacities need to increase as more work in the future is going to require more dedication to the class. We will also spend more time on design as flawed designs will impact later work.	After having gone through the process of creating the Milestone 3 items, we are more aware of how much work we can expect in the future, so we will be able to give bether estimates when the time comes. Put more time into design and researching technology so we can try and avoid running into similar issues and check with the professor more often about our designs.		We will ask Professor about how to streamline our breakdowns and design to not run into issues, and also perform breakdowns with a little bit more of a buffer in order to account for said issues		
		Sprint 10				
	Jessie	Matthew	Pammy	Viet		
	Bessie	Wattiew	1 anniny	We made considerable progress on our cloud		
What went well	We had fixed Milestone 3 Work Items as they were needed	We were able to make some of the necessary revisions to some Milestone 3 items.	Was able to make revisions to milestone 3 items.	technologies due to past work from group members and were able to create instances and databases		
Issues	Since it was the first sprint after the end of the semester, team members had a fairly low capacity.	This was our first sprint after the end of the semester, so everyone was at a low capacity.	Realllyyyyy low capacity due to break. Not really an issue as we don't really have any work items beside next semesters planning	This was our sprint in winter break after taking time off, so all our capacities were low and we were rusty getting back into the process.		
Improvements	We will change the sprint schedule so that it better fits team members' schedules as well as meeting times.	In our future sprints we will be upping our capacity so that once the semester starts, we will be good to go. We will also be trying out different sprint schedules and meeting times in preparation for the coming semester.	No improvements needed to be made	We will be reupping our capacities by at least 1/2 and review our past sprints in order to get back into the groove of things .		
		Sprint 11				
	Jessie	Matthew	Pammy	Viet		
	The team was able to increase their sprint capacities and we did a good job at meeting those capacities	Almost everyone was able to up their capacity more and hit them. We were able to make good progress in revising more Milestone 3 items as well as working on finishing DARs.	Most of us were able to hit our sprint capacities which meant we were able to improve from our last sprint	We all increased our sprint capacity and were able to do much more work than our last sprint.		
	Although there was an increase, we were not yet at our desired sprint capacity that we would like to have seen for this semester	This was our second sprint after the end of the semester, so our capacities were still lower than what we wanted.	Some of us were sick as well as winding down from a semester so we weren't able to do much	We weren't at our optimal capacities during the school year, and I had contracted COVID and had to take care of family members, so I was not able to do as much work as I would have liked		
	We will increase our sprint capacity that way we can have better alotment of tasks	We will continue to work on upping our capacity.	I don't think we have to improve much as our issues were due it being break as well as not really any work items to work on	Getting sick was unavoidable, but I will reestimate capacities. I also spent excess time on DARs, so I will send more frequent emails to clarify confusion instead of wasting time		
		Sprint 12				
	Jessie	Matthew	Pammy	Viet		
	We were able to make the necessary adjustments and revisions to the Project Plan	We were able to finish making revisions to our project plan as needed.	We were able revise the project plan and BRD	Our team did well under pressure by revising the project plan in the short amount of time we were given, as we had to push many work items back and make space for new work items		
	Re-estimations of work items caused a realization of there being more work we need to do. Also being the first sprint of the semester, capacities were fairly low.	This was our first sprint of the semster, but our capacities were still a bit on the low side. Some of our items we realized would take longer than estimated, and that we also had to make changes to account for new information that the professor lectured on.	We had to split up the features among our group again as are group expanded. We were not really sure of what our estimations would look like. We also did not put in enough into our sprint capacity as we were still in winter break.	Certain things were rushed in the revision of the project plan because our BRD also had to be revised, and so our project plan estimation is not as accurate as it could have been. It was also our first sprint hitting the ground running since the break, so our capacities were suddenly spiked and it made it hard to hit said capacities.		
	The team will continue increasing their sprint capacity to what we need it to be. We will also follow the Project Plan more closely that way we can be efficient in the work delegated to team members.	We will continue upping our capacity so that we can adhere as best we can to the project plan. We will try to estimate better how much work things should take, also taking into consideration what the professor might be lecturing on.	We will increase capacity as well as get a better feel of what the team can do for our estimations.	Improvements that could be made are to slowly ramp up capacities, because otherwise the sudden increase of capacities would be hard to hit. An improvement would be to add 1 or 2 hours of capacity everyday for the duration of the sprint, and depending on how those capacities are hit we can continue increasing.		
		the second secon	Sprint 13			
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
	Throughout this sprint I was able to have a much better scheduling of work due to the revised Project Plan that was much more detailed in the breakdowns as well as the reevaluations of work	During this sprint, I was able to get a solid understanding of the requirements for Authentication and what exactly needs to be done for this core component. Almost everyone went to most of the available office hours and were able to get all of of questions answered and feedback from	I think I was able to really understand how much work will go into a single feature (planning, implementing, testing). Most of the team was able	Our team was able to get our cloud DARs approved, which were leftover from last sprint. Those were crucial because we need those technologies order to set up the database and VMs, and to store and deploy our application. I was also able to get a good understanding of account deletion and how to delete all references	This is my first completed sprint with my new team. I understand the SCRUM methodology better than my previous attempt. I managed to get the tables and UML model. I managed to get the business rules and requirements from most of my tearnmates and managed to implement them in the tables. Getting used to the daily meetings and slowly getting used to the accountability was the	
	items.	the professor.	to meet daily as well as attend office hours.	of the account by performing a stored procedure.	best thing for me.	

		Because I did not have a solid grasp of what exactly was needed for Authentication and how to				
		put the parts together, I spent a lot more time on research, diagraming, and getting feedback on the				
		flow during office hours, which resulted in my				
		being unable to complete the test writeup and				
		backend code for Authentication. An issue that we had overall as a team was along the same lines. I				
		would say that almost everyone needed to get				
		more clarification on how best to design their				
		component, which resulted in more time designing				
		and researching, and less time implementing. These reasons are why some people were not				
		able to finish the coding that we had previously		I had remaining work from last sprint leftover, and	Despite my successes, I need to catch up with the	
		planned to do. Another issue is that Ryan has not		that also seems to be the case for this sprint as	ASP.NET framework. I need to read up on it to	
		been attending meetings (the last meeting he attended was last Sunday, so an entire week ago),		well. The design portion of my core component took much more time than expected, so backend	prepare for my feature. Since I joined this team, I spent a significant portion of the sprint

	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
What went	Was able to work at a capacity higher than previous sprints	I was able to get the backend for all of my components done and tested for functionality.	Was able to finish my front end and my backend	I was able to get certain parts of my components done	I was able to get my parts of the InMemoryDAO and SQLDAO setup more or less.	

	Issues that caused a delay of progress was having to take a lot of time to work on additional SqlDAO and InMemorySQLDAO methods in order for my component of UAD to work. In addition the methods that had been implemented for the UAD werent functional and I had to spend time fixing their logic. Another issue that came was a relatively late decision to change Column names in the database because that caused an additional sweep of changes that needed to be done in order to fix the SqlDAO.	her other tasks in helping to implement the front end for other components (but she was only) assigned these additional frontend tasks in order to get her to her estimated capacity and the backend for these components was not complete yet either). Part of the reason is due to her having family emergencies during the sprint. Viet also did not his capacity and did not complete his component. His actual indicated completed capacity should be lower as he did not in fact do any front end work for his work item during the sprint. He partially completed the backend for his Logout component, but did not get to his front end, and he did not complete all the tasks for the DAC that he was given in order to reach his estimated capacity, lan indicated that he hit his capacity and his estimates for all his tasks, but he still has	not able to do other group members front ends because they did not finish their backend in time. Or in some cases was asked to make a front end within hours of the project being due. I had to spend some extra time on DARS that were not originally accounted for (AJAX) as well as issues with cross origin resource sharing. We had an issue with the front end and the backend not wanting to communcate with each other. In regards to connecting to the middleware, I was not	was adamant on changing them for maintainability, which could easily have been done after the team code review. Ian's table design was also problematic, as certain tables had almost identical field names to other tables, and certain primary and foreign key constraints were not made properly. I had to spend more time than expected fixing up those tables, and all team members besides Matthew had to go back and change up the names in their code. I did discuss and set up my front end with Pammy, so I indicated that I did work on it on my burnup chart, however the changes weren't uploaded to github since we were	The issues this time were more related to communication. I had a fear that I was doing duplicate work. That held me back a little. Thankfully, I was able to clarify my other tearmates did that did not exactly affect my work. Still, I need to communicate better with my tearmates about work I have done and work they have done. Another thing that threw me off was the in memory dao. While doing the estimates, I did not take into account implementing and testing the in memory dao. I at first did not know exactly what entailed an in memory dao. Afterwards, it was simpler than I thought. It still took me time to test out the in memory dao and sql dao. All of that took more time than estimated.	
		needed for both integration and unit testability for backend work when making my estimates. In order		work in my sprints so that I will be able to get work		
Improvements	day so that high sprint capacities aren't an issue	to	Sprint 15	done to prevent this issue from happening again	the ruture.	
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
	I was able to implement new changes we needed	I was able to meet my capacity for this sprint in regards to all my work items. I got lots of questions answered from office hours and help/direction from the professor regarding some things. Implementing logging took less time than estimated, so I was able to instead spend more time working on the Cookel Middleware.	I was able to understand doing the front end and	I was able to further complete my backend and	I was able to get the sqldao and in memory dao	
	I overestimated my sprint capacity as well as underestimated certain work items therefore I was not able to meet my expected capacity	out additional necessary work or requiring revision work after getting feedback from the professor. We also had issues with merging code to GitHub.		and missed opportunities in my code, which meant I needed to revise much of it. But for this sprint, i didnt make a backend implementation work item, so most of my points did not show up in the burnup	the previous sprint. I made a mistake on when the sprint would end. That threw my forcast and	
	I will be more realistic with my sprint capacity in addition to better estimation of future work items as I have more knowledge of various processes/implementations	We will have dedicated work items for code merges. In terms of individual capacities, I will be monitoring more closely everyones work and discuss any other issues that arise in regards to meeting capcity with said individuals. While not exactly quantitative, members need to be making better estimates based on past sprint data and knowledge of potential future impediments.	I've made sure to include revisions in my next sprint (sprint 16)	There was a lot of revisions and design I made which had no work item for, so this sprint i will be sure to add a work item that accounts for revisions of past tasks and work items. I will continue to try to reach old capa	I will be taking into account the complexity of the task at hand. I will also be more careful about planning my sprints.	
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
What went well	I was able to get a majority of the component done for Create Node	I completed all my work items for this sprint. Switched to the token authentication and was able to get it working with little trouble compared to the previous cookie authentication. Just based on completed cancelly the town did much better in	I was able to meet my capacity and finish my work items. I was also to finally create a production environment	I was able to hit my capacity and able to revise and add much more functionality to my account deletion component	During spring break, I was able to hit my capacity.	

		Viet did not get to any of his planned UM work.				
	Poor foresight of future technologies we would end up using resulting in having to go through the DAR Process more than was actually necessary. Did not get to wrapping up the UAD Component.	instead he spent the entire time continuing his work on account deletion. Because of this, although the team chart looks much better based on completed capacity, some planned work items are not being completed, bessle also had some tasks/work items that he did not do. However this is not readily apparent just by looking at the team	Due to having more time during spring break, I found that I was going to reach my capacity much sooner than expected. I therefore, had to slow down at the end, which is not good for productivities sake.	Account deletion testing took way longer than expected, which is why the expected capacity is exceeded, but the testing is still not done. Because the testing was unable to be finished, I was unable to get to fully implement front end. There are many more cases for account deletion that I didn't factor in before until we started. Another issue was that I got sick for 2 days, which brought down the capacities of those days by a lot and prevented me from doing work.	Even though I had more time during spring break, I found that I needed more time to work on my work items. It was more difficult to find time to do it. I needed more time to complete testing for my features than I thought. It took more time to figure out async testing.	
Improvements	Once we get approval of the technologies we need, there shouldn't have to be any more DAR processes we have to go through. Sprint Planning will be done more accurately so that any revisions or extra tasks will be accounted for and be put into schedule better,	work based on previous experience, better time	While I don't see the having an increase in time during the next couple of weeks, I will make sure that my sprints take into account extra time or less time	I have done a more granular breakdown of my tasks this sprint, and I gave certain tasks such as design and frontend implementation great points as a buffer just in case they take longer than expected.	Will make sure to provide better estimates for all of my work items.	
			Sprint 17			
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
What went well	I was able to get the Backend Implementation complete for Delete Node so that and Create Node are ready to be implemented in the front end		This sprint i was able to get all of my tasks done as well as hit my capcity.		I managed to get the front end coding done.	
Issues	As the work capacity shows, I was not able to get to the Front End for Tree Components,		I did not run into any issues, as a team we were not able to meet our capacity or finish work items.	I wasn't able to get as much work done on my individual component as I would've liked.	I was caught off-guard by exams and assignments announced in the middle of the sprint. I had lower capacity than expected.	
Improvements	I will devote more time in the day towards this class and the freed up class time will assist in that		Since this is more of a team issue, I will make sure to encourage others to finish their tasks	I will be devoting all the time of my next sprint into completing my individual component, and will be discussing critical front end and backend aspects of my component with my group.
