Decisions			I will not be doing and a Search this sprint as exceed my capacity for in constrast to the pro have in fact combines feature with the Search per the professors rem topic, which is why th more work items spec Filter.	s it will far or this sprint. oject plan, I d the Filter h feature as harks on the here are no					I will also be postponing UM and setting nodes public/private in order to focus on my component for the individual code review. I expect this component to be front end heavy, so I have kept the capacity relatively the same in order to account for any issues I might run into along the way.											
Final Expected Work Capacity			62			43

		Sprint 5			
	Jessie	Matthew	Pammy	Viet	
			,		
What went well	Through feedback and office hours we were able to refine our Scrum process by being more detailed	We acted on some of the feedback on our Scrum, this can be seen in our new project sheets.	Our scrum process was much more refined than last time, thanks to the feedback provided in our last retrospective and in office hours.	We got a lot of feedback from office hours and improved how we performed scrum	
Issues	Low sprint capacities as well as unexpected interruptions from other classes	We were still missing some things from showing off our sprint planning process and everyone's capacities were quite low for this sprint. We did not have a set time for updating our burnup charts,	Low sprint capacities made us not able to do much. We were pretty inconsistent with out burnup chart.	Some people were busy with classes (me included) so it made it hard to finish tasks that were assigned this sprint	
Improvements	Update scrums and burnup charts at 11pm everyday	We will have all of our burnup chart updates and Scrums posted by 11pm everyday.	Burnup charts and scrumwill be required to be posted by 11 PM everyday	We now have a set time to update our scrums and burnup charts	
		Sprint 6			
	Jessie	Matthew	Pammy	Viet	
What went well	More strict enforcement of Daily Scrum Logs and Burnup chart updates gave better insight into Team Progress	We improved our Sprint planning process by following all the steps that we discussed with the professor during office hours. This can be seen in our new Project Sheet Document. We improved the documenting of our daily Scrums and updating our Burnup Charts by setting a deadline of 11pm.	Burnup charts and scrum updated at 11pm every night. This in turn made our Project Sheet Document more accuarte.	Our scrum process was more in line with what Professor had in mine	
Issues	Work capacities were fairly low due to other issues that had presented themselves	Despite getting everyones initial capacities, issues arose that resulted in less work than predicted.	Low initial capacities and low moral.	Other classes started kicking in, and I had less time capacities	
	Team Lead will send reminders and a report of the	Everyday at the end of our daily meetings, the team leader will send out a notification in regards to everyone's daily performance, according to their burnup charts and daily Scrums, and what improvements they need to	Team leader will send a notification on daily performance, reminders on burnup charts and	Our team lead would give a daily performance	
Improvements	daily performance	make in the remaining time of the sprint.	daily scrums	report at the end of our scrums	
		Sprint 7			
	Jessie	Matthew	Pammy	Viet	
What went well	Jessie The team was able to complete most of the work we had for this Sprint despite any issues that presented themselves	Matthew Despite the issues that we ran into, the team was able to mostly complete all of the work that we brought in for this sprint. We also made further adjustments to our project and sprint planning.	Pammy	Viet Even though we ran into problems, the team as a whole was able to finish up a lot of the work that was assigned this sprint	
	The team was able to complete most of the work we had for this Sprint despite any issues that presented themselves Timing with other class assignments created	Despite the issues that we ran into, the team was able to mostly complete all of the work that we brought in for this sprint. We also made further adjustments to our project and sprint planning. At the start of the sprint, we were still unsure of what exactly we needed to be doing in order to work towards the completion of Milestone 3. Once again, we ran into slight issues with capacities due to outside factors such as other classes. Not everyone was complying with the deadlines for	Issues in understanding what was needed in low level design prevented us from really contributing much this sprint. In general, this is due to a lack of	Even though we ran into problems, the team as a whole was able to finish up a lot of the work that was assigned this sprint

Insues Improvements What went well Issues	The team was able to complete most of the work we had for this Sprint despite any issues that presented themselves Timing with other class assignments created problems completing assigned work on time Improved task breakdown through discussion of work items and tasks during meetings to allow for better allocation of time thereby preventing any time creep Jessie Considering the fact that it was a break we were able to effectively plan and get to a decent amount of work As it was break we admitetly did not get to complete as much as we would have liked to	Despite the issues that we ran into, the team was able to mostly complete all of the work that we brought in for this sprint. We also made further adjustments to our project and sprint planning. At the start of the sprint, we were still unsure of what exactly we needed to be doing in order to work towards the completion of Milestone 3. Once again, we ran into slight issues with capacities due to outside factors such as other classes. Not everyone was complying with the deadlines for Scrums and Burnup chart updates. Team lead will send continue to send out notifications for posting Scrums and updating burnup charts by the designated time in addition to the notification regarding everyone's daily performance. Team lead will individually contact members who forget to post their Scrums and update burnup charts by the designated time in addition to the notification regarding everyone's daily performance. Team lead will individually contact members who forget to post their Scrums and update burnup charts by the designated time. Sprint 8 Matthew We we're able to get an airight amount of work done, considering it was a break, and we also learned a lot about LL design from the bonus lecture. It was a break week, so we weren't able to get as much done as we would have normally gotten done or planned to do. Take better consideration of the the fact that breaks usually mean people will get less work done, so in the future we will apply a default deduction to everyone's expected capacity in order to provide ourselves a better buffer.	Issues in understanding what was needed in low level design prevented us from really contributing much this sprint. In general, this is due to a tack of information on what is needed Go to office hours and clarify everything that is needed Pammy Team made a more conscious effort to attend every office hours Was not able to do much due to break Take low capacities due to break. We need to take account to this otherwise we will assign work that	Even though we ran into problems, the team as a whole was able to finish up a lot of the work that was assigned this sprint I was behind on my backlog, and busy working on other classes, I did not get much done in my sprint Our team leader will send out multiple notifications a day, more often after scrums for the team to update the burnup chart Viet I got an adequate amount of work during break, and learned sequence diagrams and how to create them. I was also able to hash out ideas with my teamates It was a sprint through break, so obviously we couldn't get that much work done but we did some good information and stuff done for milestone 3 don't try to assign too much work during a break, since we know not much work will get done. This will be different from christmas break though, because we have free time and our main printity will to get a headstart on the project. We will have sprints throughout break, but with reasonable	
Insues Improvements What went well Issues	The team was able to complete most of the work we had for this Sprint despite any issues that presented themselves Timing with other class assignments created problems completing assigned work on time Improved task breakdown through discussion of work items and tasks during meetings to allow for better allocation of time thereby preventing any time creep Jessie Considering the fact that it was a break we were able to effectively plan and get to a decent amount of work As it was break we admitetly did not get to complete as much as we would have liked to	Despite the issues that we ran into, the team was able to mostly complete all of the work that we brought in for this sprint. We also made further adjustments to our project and sprint planning. At the start of the sprint, we were still unsure of what exactly we needed to be doing in order to work towards the completion of Milestone 3. Once again, we ran into slight issues with capacities due to outside factors such as other classes. Not everyone was complying with the deadlines for Scrums and Burnup chart updates. Team lead will send continue to send out notifications for posting Scrums and updating burnup charts by the designated time in addition to the notification regarding everyone's daily performance. Team lead will individually contact members who forget to post their Scrums and update burnup charts by the designated time. Sprint 8 Matthew We we're able to get an alright amount of work done, considering it was a break, and we also learned a lot about LL design from the bonus lecture. It was a break week, so we weren't able to get as much done as we would have normally gotten done or planned to do. Take better consideration of the the fact that breaks usually mean people will get less work done, so in the future we will apply a default deduction to everyone's expected capacity in order	Issues in understanding what was needed in low level design prevented us from really contributing much this sprint. In general, this is due to a tack of information on what is needed Go to office hours and clarify everything that is needed Pammy Team made a more conscious effort to attend every office hours Was not able to do much due to break Take low capacities due to break. We need to take account to this otherwise we will assign work that	Even though we ran into problems, the team as a whole was able to finish up a lot of the work that was assigned this sprint I was behind on my backlog, and busy working on other classes, I did not get much done in my sprint Our team leader will send out multiple notifications a day, more often after scrums for the team to update the burnup chart Viet I got an adequate amount of work during break, and learned sequence diagrams and how to create them. I was also able to hash out ideas with my teamates It was a sprint through break, so obviously we couldn't get that much work done but we did some good information and stuff done for milestone 3 don't try to assign too much work during a break, since we know not much work will get done. This will be different from christmas break though, because we have free time and our main printity will to get a headstart on the project. We will have sprints throughout break, but with reasonable	

What went well	We were able to devote a good amount of time towards finishing the Milestone and Sprint putting in however many hours were necessary.	For the most part, the team was able to put in a lot of time in order to finish the Milestone. We were able to finish the design of all the Milestone items and code a majority of them.	We were able finish all the milestone documents as well as the sequence diagrams for the milestone. I think we got a good idea as a time how much effort will be needeed to complete this project	We were able to get all the required documents and diagrams done for milestone 3		
	· · · · · · · · · · · · · · · · · · ·	We had some issues with our diagrams that we only became aware of after actually coding. We did not have sufficient unit tests and not everything worked by the due date. Due to other finals, as well as personal reasons, capacity took a down turn during some moments.	We were not able to complete the work we assigned to us as our design had a lot of issues. We were not aware of the issues until after we implemented. These issues included libraries that pointed to each other	We underestimated issues in both design and coding and were rushed towards the end and our deliverable wasn't the as clean as it could have been		
	As a team we realized how our capacities need to increase as more work in the future is going to require more dedication to the class. We will also spend more time on design as flawed designs will impact later work.	After having gone through the process of creating the Milestone 3 items, we are more aware of how much work we can expect in the future, so we will be able to give better estimates when the time comes. Put more time into design and researching technology so we can try and avoid running into similar issues and check with the professor more often about our designs.	As a team we realized that we will need to put more time into design as this is something that will have future consequences. Therefore we will be attending office hours more frequently to discuss our designs	We will ask Professor about how to streamline our breakdowns and design to not run into issues, and also perform breakdowns with a little bit more of a buffer in order to account for said issues		
		Sprint 10				
	Jessie	Matthew	Pammy	Viet		
What went well	We had fixed Milestone 3 Work Items as they were		Was able to make revisions to milestone 3 items.	We made considerable progress on our cloud technologies due to past work from group members and were able to create instances and databases		
	needed Since it was the first sprint after the end of the semester, team members had a fairly low capacity.	This was our first sprint after the end of the semester, so everyone was at a low capacity.	Realllyyyyy low capacity due to break. Not really an issue as we don't really have any work items beside next semesters planning	This was our sprint in winter break after taking time off, so all our capacities were low and we were rusty getting back into the process.		
	We will change the sprint schedule so that it better	In our future sprints we will be upping our capacity so that once the semester starts, we will be good to go. We will also be trying out different sprint	No improvements needed to be made	We will be reupping our capacities by at least 1/2 and review our past sprints in order to get back into the groove of things .		
improvements	urnes.	coming semester.	No improvements needed to be made	into the groove or things .		
		Sprint 11		<u> </u>		
	Jessie	Matthew	Pammy	Viet		
	The team was able to increase their sprint capacities and we did a good job at meeting those capacities	Almost everyone was able to up their capacity more and hit them. We were able to make good progress in revising more Milestone 3 items as well as working on finishing DARs.	Most of us were able to hit our sprint capacities which meant we were able to improve from our last sprint	to do much more work than our last sprint.		
	Although there was an increase, we were not yet at our desired sprint capacity that we would like to have seen for this semester	This was our second sprint after the end of the semester, so our capacities were still lower than what we wanted.	Some of us were sick as well as winding down from a semester so we weren't able to do much	We weren't at our optimal capacities during the school year, and I had contracted COVID and had to take care of family members, so I was not able to do as much work as I would have liked		
	We will increase our sprint capacity that way we can have better alotment of tasks	We will continue to work on upping our capacity.	I don't think we have to improve much as our issues were due it being break as well as not really any work items to work on	Getting sick was unavoidable, but I will reestimate capacities. I also spent excess time on DARs, so I will send more frequent emails to clarify confusion instead of wasting time		
		Sprint 12				
	Jessie	Matthew Sprint 12	Pammy	Viet		
			We were able revise the project plan and BRD	Our team did well under pressure by revising the project plan in the short amount of time we were given, as we had to push many work items back and make space for new work items.		
	Re-estimations of work items caused a realization of there being more work we need to do. Also being the first sprint of the semester, capacities were fairly to.	This was our first sprint of the semster, but our capacities were still a bit on the low side. Some of our items we realized would take longer than	We had to split up the features among our group again as are group expanded. We were not really sure of what our estimations would look like. We also did not put in enough into our sprint capacity as we were still in winter break.	Certain things were rushed in the revision of the project plan because our BRD also had to be revised, and so our project plan estimation is not as accurate as it could have been. It was also our first sprint hitting the ground running since the break, so our capacities were suddenly spiked and it made it hard to hit said capacities.		
	The team will continue increasing their sprint capacity to what we need it to be. We will also follow the Project Plan more closely that way we can be efficient in the work delegated to team members.	We will continue upping our capacity so that we can adhere as best we can to the project plan. We will try to estimate better how much work things should take, also taking into consideration what the professor might be lecturing on.	We will increase capacity as well as get a better feel of what the team can do for our estimations.	Improvements that could be made are to slowly ramp up capactiles, because otherwise the sudden increase of capacities would be hard to hit. An improvement would be to add 1 or 2 hours of capacity everyday for the duration of the sprint, and depending on how those capacities are hit we can continue increasing.		
		<u> </u>	Sprint 13	<u> </u>		
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
	Throughout this sprint I was able to have a much better scheduling of work due to the revised Project Plant that was much more detailed in the	During this sprint, I was able to get a solid understanding of the requirements for Authentication and what exactly needs to be done for this core component. Almost everyone went to most of the available office hours and were able to	I think I was able to really understand how much work will go into a single feature (planning,	Our team was able to get our cloud DARs approved, which were leftover from last sprint. Those were crucial because we need those technologies order to set up the database and VMs, and to store and deploy our application. I was also able to get a good understanding of	This is my first completed sprint with my new team. I understand the SCRUM methodology better than my previous attempt. I managed to get the tables and UML model. I managed to get the business rules and requirements from most of my teammates and managed to implement them in the tables. 			Sprint 14			
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
What went well	Was able to work at a capacity higher than previous sprints	I was able to get the backend for all of my components done and tested for functionality.	Was able to finish my front end and my backend	I was able to get certain parts of my components done	I was able to get my parts of the InMemoryDAO and SQLDAO setup more or less.	

	Issues that caused a delay of progress was having to take a lot of time to work on additional SqlDAO and InMemorySQLDAO methods in order for my component of UAD to work. In addition the methods that had been implemented for the UAD weren't functional and I had to spend time fixing their logic. Another issue that came was a relatively late decision to change Column names in the database because that caused an additional sweep of changes that needed to be done in order to fix the SqlDAO.	her other tasks in helping to implement the front end for other components (but she was only) assigned these additional frontend tasks in order to get her to her estimated capacity and the backend for these components was not complete yet either). Part of the reason is due to her having family emergencies during the sprint. Viet also did not his capacity and did not complete his component. His actual indicated completed capacity should be lower as he did not in fact do any front end work for his work item during the sprint. He partially completed the backend for his Logout component, but did not get to his front end, and he did not complete all the tasks for the DAC that he was given in order to reach his estimated capacity, lan indicated that he hit his capacity and his estimates for all his tasks, but he still has	not able to do other group members front ends because they did not finish their backend in time. Or in some cases was asked to make a front end within hours of the project being due. I had to spend some extra time on DARS that were not originally accounted for (AJAX) as well as issues with cross origin resource sharing. We had an issue with the front end and the backend not wanting to communicate with each other. In regards to connecting to the middleware, I was not	properly. I had to spend more time than expected fixing up those tables, and all team members besides Matthew had to go back and change up the names in their code. I did discuss and set up my front end with Pammy, so I indicated that I did work on it on my burnup chart, however the	The issues this time were more related to	
		needed for both integration and unit testability for backend work when making my estimates. In order		I will lower my capacity by 5 and reestimate the work in my sprints so that I will be able to get work		
Improvements	day so that high sprint capacities aren't an issue	to	Sprint 15	done to prevent this issue from happening again	the ruture.	
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
	I was able to implement new changes we needed	I was able to meet my capacity for this sprint in regards to all my work items. I got lots of questions answered from office hours and help/direction from the professor regarding some things. Implementing logging took less time than estimated, so I was able to instead spend more time working on the Cookel Middleware.	I was able to understand doing the front end and	I was able to further complete my backend and frontend implementation of my account deletion component that was left unfinished from last sprint	I was able to get the sqldao and in memory dao	
	I overestimated my sprint capacity as well as underestimated certain work items therefore I was not able to meet my expected capacity	out additional necessary work or requiring revision work after getting feedback from the professor. We also had issues with merging code to GitHub.		The team code review highlighted a lot of flaws and missed opportunities in my code, which meant I needed to revise much of it. But for this sprint, I didnt make a backend implementation work item, so most of my points did not show up in the burnup chart.	the previous sprint. I made a mistake on when the sprint would end. That threw my forcast and	
	I will be more realistic with my sprint capacity in addition to better estimation of future work items as I have more knowledge of various processes/implementations	We will have dedicated work items for code merges. In terms of individual capacities, I will be monitoring more closely everyones work and discuss any other issues that arise in regards to meeting capcity with said individuals. While not exactly quantitative, members need to be making better estimates based on past sprint data and knowledge of potential future impediments.	I've made sure to include revisions in my next sprint (sprint 16)	There was a lot of revisions and design I made which had no work item for, so this sprint i will be sure to add a work item that accounts for revisions of past tasks and work items. I will continue to tro reach old capacities, so my workload is back up to my old capacities.	I will be taking into account the complexity of the task at hand. I will also be more careful about planning my sprints.	
	Jessie	Matthew	Pammy	Viet	Ian Ho-Sing-Loy	Ryan
What went well	I was able to get a majority of the component done for Create Node	I completed all my work items for this sprint. Switched to the token authentication and was able to get it working with little trouble compared to the previous cookie authentication. Just based on completed cancelly the town did much better in	I was able to meet my capacity and finish my work items. I was also to finally create a production environment		During spring break, I was able to hit my capacity.	

	Poor foresight of future technologies we would end up using resulting in having to go through the DAR Process more than was actually necessary. Did not get to wrapping up the UAD Component.	tasks/work items that he did not do. However this is not readily apparent just by looking at the team	Due to having more time during spring break, I found that I was going to reach my capacity much sooner than expected. I therefore, had to slow down at the end, which is not good for productivities sake.	Account deletion testing took way longer than expected, which is why the expected capacity is exceeded, but the testing is still not done. Because the testing was unable to be finished, I was unable to get to fully implement front end. There are many more cases for account deletion that I didn't factor in before until we started. Another issue was that I got sick for 2 days, which brought down the capacities of those days by a lot and prevented me from doing work.	Testing for my feature took longer than expected.	
Improvements	Once we get approval of the technologies we need, there shouldn't have to be any more DAR processes we have to go through. Sprint Planning will be done more accurately so that any revisions or extra tasks will be accounted for and be put into schedule better,	work based on provious experience, better time	While I don't see the having an increase in time during the next couple of weeks, I will make sure that my sprints take into account extra time or less time	I have done a more granular breakdown of my tasks this sprint, and I gave certain tasks such as design and frontend implementation great points as a buffer just in case they take longer than expected.	Will make sure to provide better estimates for all of my work items.
