| Decisions | | | I made the decision to increase the amount of time for the backend code as I feel like I will need some more time to implement the AviToken and encryption. I also increased the time to the set written in the test written in response to this. In contrast, I frontient code to be lower as it should not take as long as I previously estimated. | | | | | | | nn ca da lo o cl th me da im I l: c w | here was no eed for a test see written for tabase setup- ny'n seeded to a test see written for tabase setup- ny'n seeded to tabase setup- ny'n seeded to tabase setup- plementation, away on to been able to able to the seed of the seed of the seeded of the test of test | | | | | | We decided to take Jessis off of Create Noda Take Jessis off of Create Noda Take Jessis off of Create Noda Take Jessis of Logout for this sprint. | | | Sprint 5 | | | |
|--|--|---|---|---|--|
| | Jessie | Matthew | Pammy | Viet | |
| | | | , | | |
| What went well | Through feedback and office hours we were able to refine our Scrum process by being more detailed | We acted on some of the feedback on our Scrum, this can be seen in our new project sheets. | Our scrum process was much more refined than last time, thanks to the feedback provided in our last retrospective and in office hours. | We got a lot of feedback from office hours and improved how we performed scrum | |
| Issues | Low sprint capacities as well as unexpected interruptions from other classes | We were still missing some things from showing off our sprint planning process and everyone's capacities were quite low for this sprint. We did not have a set time for updating our burnup charts, | Low sprint capacities made us not able to do much. We were pretty inconsistent with out burnup chart. | Some people were busy with classes (me included) so it made it hard to finish tasks that were assigned this sprint | |
| Improvements | Update scrums and burnup charts at 11pm everyday | We will have all of our burnup chart updates and Scrums posted by 11pm everyday. | Burnup charts and scrumwill be required to be posted by 11 PM everyday | We now have a set time to update our scrums and burnup charts | |
| | | | | | |
| | | Sprint 6 | | | |
| | Jessie | Matthew | Pammy | Viet | |
| What went well | More strict enforcement of Daily Scrum Logs and Burnup chart updates gave better insight into Team Progress | We improved our Sprint planning process by following all the steps that we discussed with the professor during office hours. This can be seen in our new Project Sheet Document. We improved the documenting of our daily Scrums and updating our Burnup Charts by setting a deadline of 11pm. | Burnup charts and scrum updated at 11pm every night. This in turn made our Project Sheet Document more accuarte. | Our scrum process was more in line with what Professor had in mine | |
| Issues | Work capacities were fairly low due to other issues that had presented themselves | Despite getting everyones initial capacities, issues arose that resulted in less work than predicted. | Low initial capacities and low moral. | Other classes started kicking in, and I had less time capacities | |
| | Team Lead will send reminders and a report of the | Everyday at the end of our daily meetings, the team leader will send out a notification in regards to everyone's daily performance, according to their burnup charts and daily Scrums, and what improvements they need to | Team leader will send a notification on daily performance, reminders on burnup charts and | Our team lead would give a daily performance | |
| Improvements | daily performance | make in the remaining time of the sprint. | daily scrums | report at the end of our scrums | |

This will be different from christmas break though, because we have free time and our main printity will to get a headstart on the project. We will have sprints throughout break, but with reasonable | |

| What went well | We were able to devote a good amount of time towards finishing the Milestone and Sprint putting in however many hours were necessary. | For the most part, the team was able to put in a lot of time in order to finish the Milestone. We were able to finish the design of all the Milestone items and code a majority of them. | We were able finish all the milestone documents as well as the sequence diagrams for the milestone. I think we got a good idea as a time how much effort will be needeed to complete this project | We were able to get all the required documents and diagrams done for milestone 3 | | |
|----------------|---|---|--|---|--|--|
| Issues | Our work as not as complete as it could have been and there were some issues in our design that we were not aware of until after we had implemented it. | worked by the due date. Due to other finals, as well as personal reasons, capacity took a down turn during some moments. | We were not able to complete the work we assigned to us as our design had a lot of issues. We were not aware of the issues until after we implemented. These issues included libraries that pointed to each other | We underestimated issues in both design and coding and were rushed towards the end and our deliverable wasn't the as clean as it could have been | | |
| Improvements | As a team we realized how our capacities need to increase as more work in the future is going to require more dedication to the class. We will also spend more time on design as flawed designs will impact later work. | After having gone through the process of creating the Milestone 3 items, we are more aware of how much work we can expect in the future, so we will be able to give better estimates when the time comes. Put more time into design and researching technology so we can try and avoid running into similar issues and check with the professor more often about our designs. | | We will ask Professor about how to streamline our breakdowns and design to not run into issues, and also perform breakdowns with a little bit more of a buffer in order to account for said issues | | |
| | | Sprint 10 | | | | |
| | Jessie | Matthew | Pammy | Viet | | |
| | ocasic . | Wattiew | 1 anniy | We made considerable progress on our cloud | | |
| What went well | We had fixed Milestone 3 Work Items as they were needed | We were able to make some of the necessary revisions to some Milestone 3 items. | Was able to make revisions to milestone 3 items. | technologies due to past work from group members and were able to create instances and databases | | |
| Issues | Since it was the first sprint after the end of the semester, team members had a fairly low capacity. | This was our first sprint after the end of the semester, so everyone was at a low capacity. | Realllyyyyy low capacity due to break. Not really an issue as we don't really have any work items beside next semesters planning | This was our sprint in winter break after taking time off, so all our capacities were low and we were rusty getting back into the process. | | |
| Improvements | We will change the sprint schedule so that it better fits team members' schedules as well as meeting times. | In our future sprints we will be upping our capacity so that once the semester starts, we will be good to go. We will also be trying out different sprint schedules and meeting times in preparation for the coming semester. | No improvements needed to be made | We will be reupping our capacities by at least 1/2 and review our past sprints in order to get back into the groove of things . | | |
| | | | | | | |
| | | Sprint 11 | | | | |
| | Jessie | Matthew | Pammy | Viet | | |
| What went well | The team was able to increase their sprint capacities and we did a good job at meeting those capacities | Almost everyone was able to up their capacity more and hit them. We were able to make good progress in revising more Milestone 3 items as well as working on finishing DARs. | Most of us were able to hit our sprint capacities which meant we were able to improve from our last sprint | We all increased our sprint capacity and were able to do much more work than our last sprint. | | |
| Issues | Although there was an increase, we were not yet at our desired sprint capacity that we would like to have seen for this semester | This was our second sprint after the end of the semester, so our capacities were still lower than what we wanted. | Some of us were sick as well as winding down from a semester so we weren't able to do much | We weren't at our optimal capacities during the school year, and I had contracted COVID and had to take care of family members, so I was not able to do as much work as I would have liked | | |
| Improvements | We will increase our sprint capacity that way we can have better alotment of tasks | We will continue to work on upping our capacity. | I don't think we have to improve much as our issues were due it being break as well as not really any work items to work on | Getting sick was unavoidable, but I will reestimate capacities. I also spent excess time on DARs, so I will send more frequent emails to clarify confusion instead of wasting time | | |

| | We were able to make the necessary adjustments and revisions to the Project Plan | We were able to finish making revisions to our project plan as needed. | We were able revise the project plan and BRD | Our team did well under pressure by revising the project plan in the short amount of time we were given, as we had to push many work items back and make space for new work items | | |
| | Re-estimations of work items caused a realization of there being more work we need to do. Also being the first sprint of the semester, capacities were fairly low. | This was our first sprint of the semster, but our capacities were still a bit on the low side. Some of our Items we realized would take longer than estimated, and that we also had to make changes to account for new information that the professor lectured on. | We had to split up the features among our group again as are group expanded. We were not really sure of what our estimations would look like. We also did not put in enough into our sprint capacity as we were still in winter break. | Certain things were rushed in the revision of the project plan because our BRD also had to be revised, and so our project plan estimation is not as accurate as it could have been. It was also our first sprint hitting the ground running since the break, so our capacities were suddenly spiked and it made it hard to hit said capacities. | | |
| | The team will continue increasing their sprint capacity to what we need it to be. We will also follow the Project Plan more closely that way we can be efficient in the work delegated to team members. | We will continue upping our capacity so that we can adhere as best we can to the project plan. We will try to estimate better how much work things should take, also taking into consideration what the professor might be lecturing on. | We will increase capacity as well as get a better feel of what the team can do for our estimations. | Improvements that could be made are to slowly ramp up capactiles, because otherwise the sudden increase of capacities would be hard to hit. An improvement would be to add 1 or 2 hours of capacity everyday for the duration of the sprint, and depending on how those capacities are hit we can continue increasing. | | |

| | Throughout this sprint I was able to have a much better scheduling of work due to the revised Project Plan that was much more detailed in the breakdowns as well as the reevaluations of work | During this sprint, I was able to get a solid understanding of the requirements for Authentication and what exactly needs to be done for this core component. Almost everyone went to most of the available office hours and were able to get all to f questions answered and feedback from | I think I was able to really understand how much work will go into a single feature (planning, implementing, testing). Most of the team was able | Our team was able to get our cloud DARs approved, which were leftover from last sprint. Those were crucial because we need those technologies order to set up the database and VMs, and to store and deploy our application. I was also able to get a good understanding of account deletion and how to delete all references | This is my first completed sprint with my new team. I understand the SCRUM methodology better than my previous attempt. I managed to get the tables and UML model. I managed to get the business rules and requirements from most of my tearnmates and managed to implement them in the tables. Getting used to the daily meetings and slowly getting used to the accountability was the | |
| What went well | items. | the professor. | to meet daily as well as attend office hours. | of the account by performing a stored procedure. | best thing for me. | |

| | This sprint I had issues with the sequence diagram designs for the Usage Analysis Dashboard as I was not necessarily clear on all aspects of the core component, in addition I was not sure how certain aspects of the design would be shown in the sequence diagrams. I was also not able to make it to office hours as much as I would have liked to, therefore any questions that I had about design had me blocked until I reduced help from tearmrates. Due to these issues I was not able to complete all assigned tasks in this sprint (testing writeup and backend implementation), therefore I must carry it over to the next sprint. | he has not been keeping me updated on his work progress. In addition, he did not update his burn up charts with his daily work, nor did he provide his forecast burn for the sprint, which is why the burnup chart for this sprint is so messed up (forecast burn is lacking and overall team work is even lower with the addition of the previously mentiond issues)During one of the previously find the situation, and conveyed his words to Ryan, albeit over text since I was still unable to get him to meet with me. | requirement feature. I spent most of my time designing and writing the DAR (understanding and testing). This left some work leftover for the next sprint that I will have to make up for. The rest of the team had the same issues with not allocating enough time to implement the project and spending more time on the design portion. We also had issues with a member not joining daily. | that also seems to be the case for this sprint as well. The design portion of my core component took much more time than expected, so backend implementation has been pushed back to next sprint. That caused me to miss my points target by a lot since i wasn't able to get to backend implementation. I also had to spend almost half of my sprint finishing the cloud DARs, as creating and estimating metrics took longer than expected. I prioritized the DARs since they were leftover from last sprint, but that caused the chain effect of me now pushing back this sprint's work to next sprint, | not perfect, especially those who do not communicate readily. Part of creating the tables | |
|----------------|--|---|---|--|---|------|
| | In the future, I will try and attend more office hours with presentable work so that I may recieve | of my progress. We will be discussing Ryan's | I will estimate more hours that will be needed. I've allocated more time in my personal life to work on | In the future, I will do my best to attend all office hours, and also come with a draft and questions, because not only will I get feedback on my draft, but it will also branch off into other related topics or details which were not considered before. I will also be dedicating much more time on design with the professor and my team in order to quickly finalize design to code things up. | I will attend more office hours with questions. I will prioritize the task items in the sprint more in the early days of the sprint. I will also read more into ASP.NET and get myself up to speed. | |
